EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Andrew B Freistein on September 7, 2007.

The application has been amended as follows:

In the specification, after the title, please insert the following:

--This application is a 371 of PCT/JP04/07349 05/28/2004 --.

In the Abstract: Please cancel the current abstract and insert the newly submitted abstract.

In the claims: Please cancel claims 50-57

Allowable Subject Matter

1. Claims 10-49 are allowed.
2. The following is an examiner's statement of reasons for allowance: The most relevant prior art or reference is that of Sakurada, et al '260 B2. However, it does not teach nor fairly suggest singularly or in any combination thereof a method for producing a single crystal with pulling the single crystal from a raw material melt in a chamber by Czochralski method, wherein when growing the single crystal, where a pulling rate is defined as V (mm/min), a temperature gradient of the crystal at the vicinity of solid-liquid interface at a central portion of the crystal is defined as G_c (*C/mm), and a temperature

gradient of the crystal at the vicinity of solid-liquid interface at a peripheral portion of the crystal is defined as G_e (*C/mm) during growing a straight body of the single crystal, during pulling the single crystal, the temperature gradient G_c of the crystal at the central portion of the crystal are controlled by changing a distance between a melt surface of the raw material melt and a heat insulating member provided in the chamber so as to oppose to the surface of the raw material melt, thereby $G = |G_c - G_e|$ which is difference between the temperature gradient G_c at the central portion of the crystal and the temperature gradient G_e at the peripheral portion of the crystal is 0.5*C/mm or less, and also V/G_c (mm²/*C x min) which is a ratio of the pulling rate V and the temperature gradient G_c at the central portion of the crystal is controlled so that a single crystal including a desired defect region is grown.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
